

Progressive Implantology & Periodontics Opens Fourth Location in the Greater Rochester Area

ROCHESTER, N.Y., September 30, 2009 – Progressive Implantology & Periodontics has opened its fourth location in Webster. With four convenient locations throughout Rochester (Pittsford, Greece, Geneseo & now Webster), Progressive Implantology & Periodontics offers virtually painless laser gum surgery, dental implants, implant dentures and periodontal maintenance programs.

Progressive Implantology & Periodontics is committed to providing patients with the latest and most advanced technologies offered in the field of dental implants and periodontics, including LANAP (Laser Assisted New Attachment Procedure), dental implants, implant dentures and sedation dentistry. LANAP, also known as Laser Periodontal Therapy™, is a fast, minimally invasive alternative to traditional gum surgery. For many patients, laser gum surgery is an effective, virtually painless option because it requires no cutting or stitches.

Gum (periodontal) disease is a bacterial infection affecting people's gums and the bone supporting their teeth. Research has linked serious health conditions such as heart disease, stroke, diabetes, some forms of cancer and rheumatoid arthritis with gum disease. In addition, more than 55 million teeth are extracted as a result of infection, gum disease or accident each year. Laser gum surgery is an effective, virtually painless, suture-free way to treat gum disease.

People interested in learning more about the laser treatment can contact Progressive Implantology & Periodontics at 585.385.GUMS (4867) or visit them on the Web at www.RochesterPerio.com.
